Redesigning the future of single use-bags
A bag that dissolves in water in minutes.

What is Cassava?
Cassava is a root vegetable, we extract and combine it with organic components to formulate the biodegradable film. Through advanced technology at Cassava Bags Australia we are able to make it without the use of any petroleum or toxins.

Strength & Durability
Designed to be use for multi purposes, Cassava Bags are strong and durable. Weight load 25kg + depending on thickness and size.

Zero Plastic Waste

Cassava Bags have been tested by Internatioanly recognised laboratory as a 100% plastic free and biodegradable product.

- It takes 3-6 months to biodegrade in soil
- It takes a few days to dissolve in the ocean
- It takes 3 minutes to dissolve in hot water
- No microplastics

100% Non-Toxic

They are completely non-toxic! Once discarded, Cassava Bags do not harm the environment making them perfect for single-use design. There are no microplastics or toxins, and there is no plastic footprint left behind. It is simple, our products resemble plastic, but are completely natural, biodegradable, compostable.
